Act as a business consultant. I'm going to give you a list of problems in my business and I want you to find the root cause underlying all these problems.

Context: [Explain what you are trying to do].

Here are the problems [List what's going wrong and the roadblocks you are currently facing].

What are 5 possible root causes that's creating these problems?

I'm [describe your business] and trying to achieve [Give your business goal]. The root cause of my problem is:

[provide the root problem from previous AI output]. The desired outcomes from solving this problem are: [describe your specific goals in order]. Given my problem and my goals, list the 5 best potential ways to solve the problem.

For each possible solution you just listed. Act as an expert business analyst and outline the benefits and drawbacks of each in a bullet pointed list. The benefits and draw backs need to be specific to the information I provided about me and my situation.

For each possible solution you listed, show me 3 possible outcomes: 1)Best case

2) Likely case

3) Worst case.

Describe the case, then tell me what factors could cause each case to happen.

Given my background, goals, and the pros and cons of each option, rank the solutions you gave me in order of how well they align with the following goals: 1) Specifically targeting the root case

2) Help me achieve my goals

3) Have less significant downsides.

Explain why you ranked each option that way.
